Acoustic Ceiling T-Grid Baffles are designed to improve sound comfort and reduce unwanted reverberation in interiors.

GridVibe™ Ceiling combines effective sound absorption with lightweight modular construction and contemporary design. Easy to assemble and install, the system provides an effective acoustic solution for offices, meeting rooms, hospitality spaces, restaurants, retail & other commercial environments.

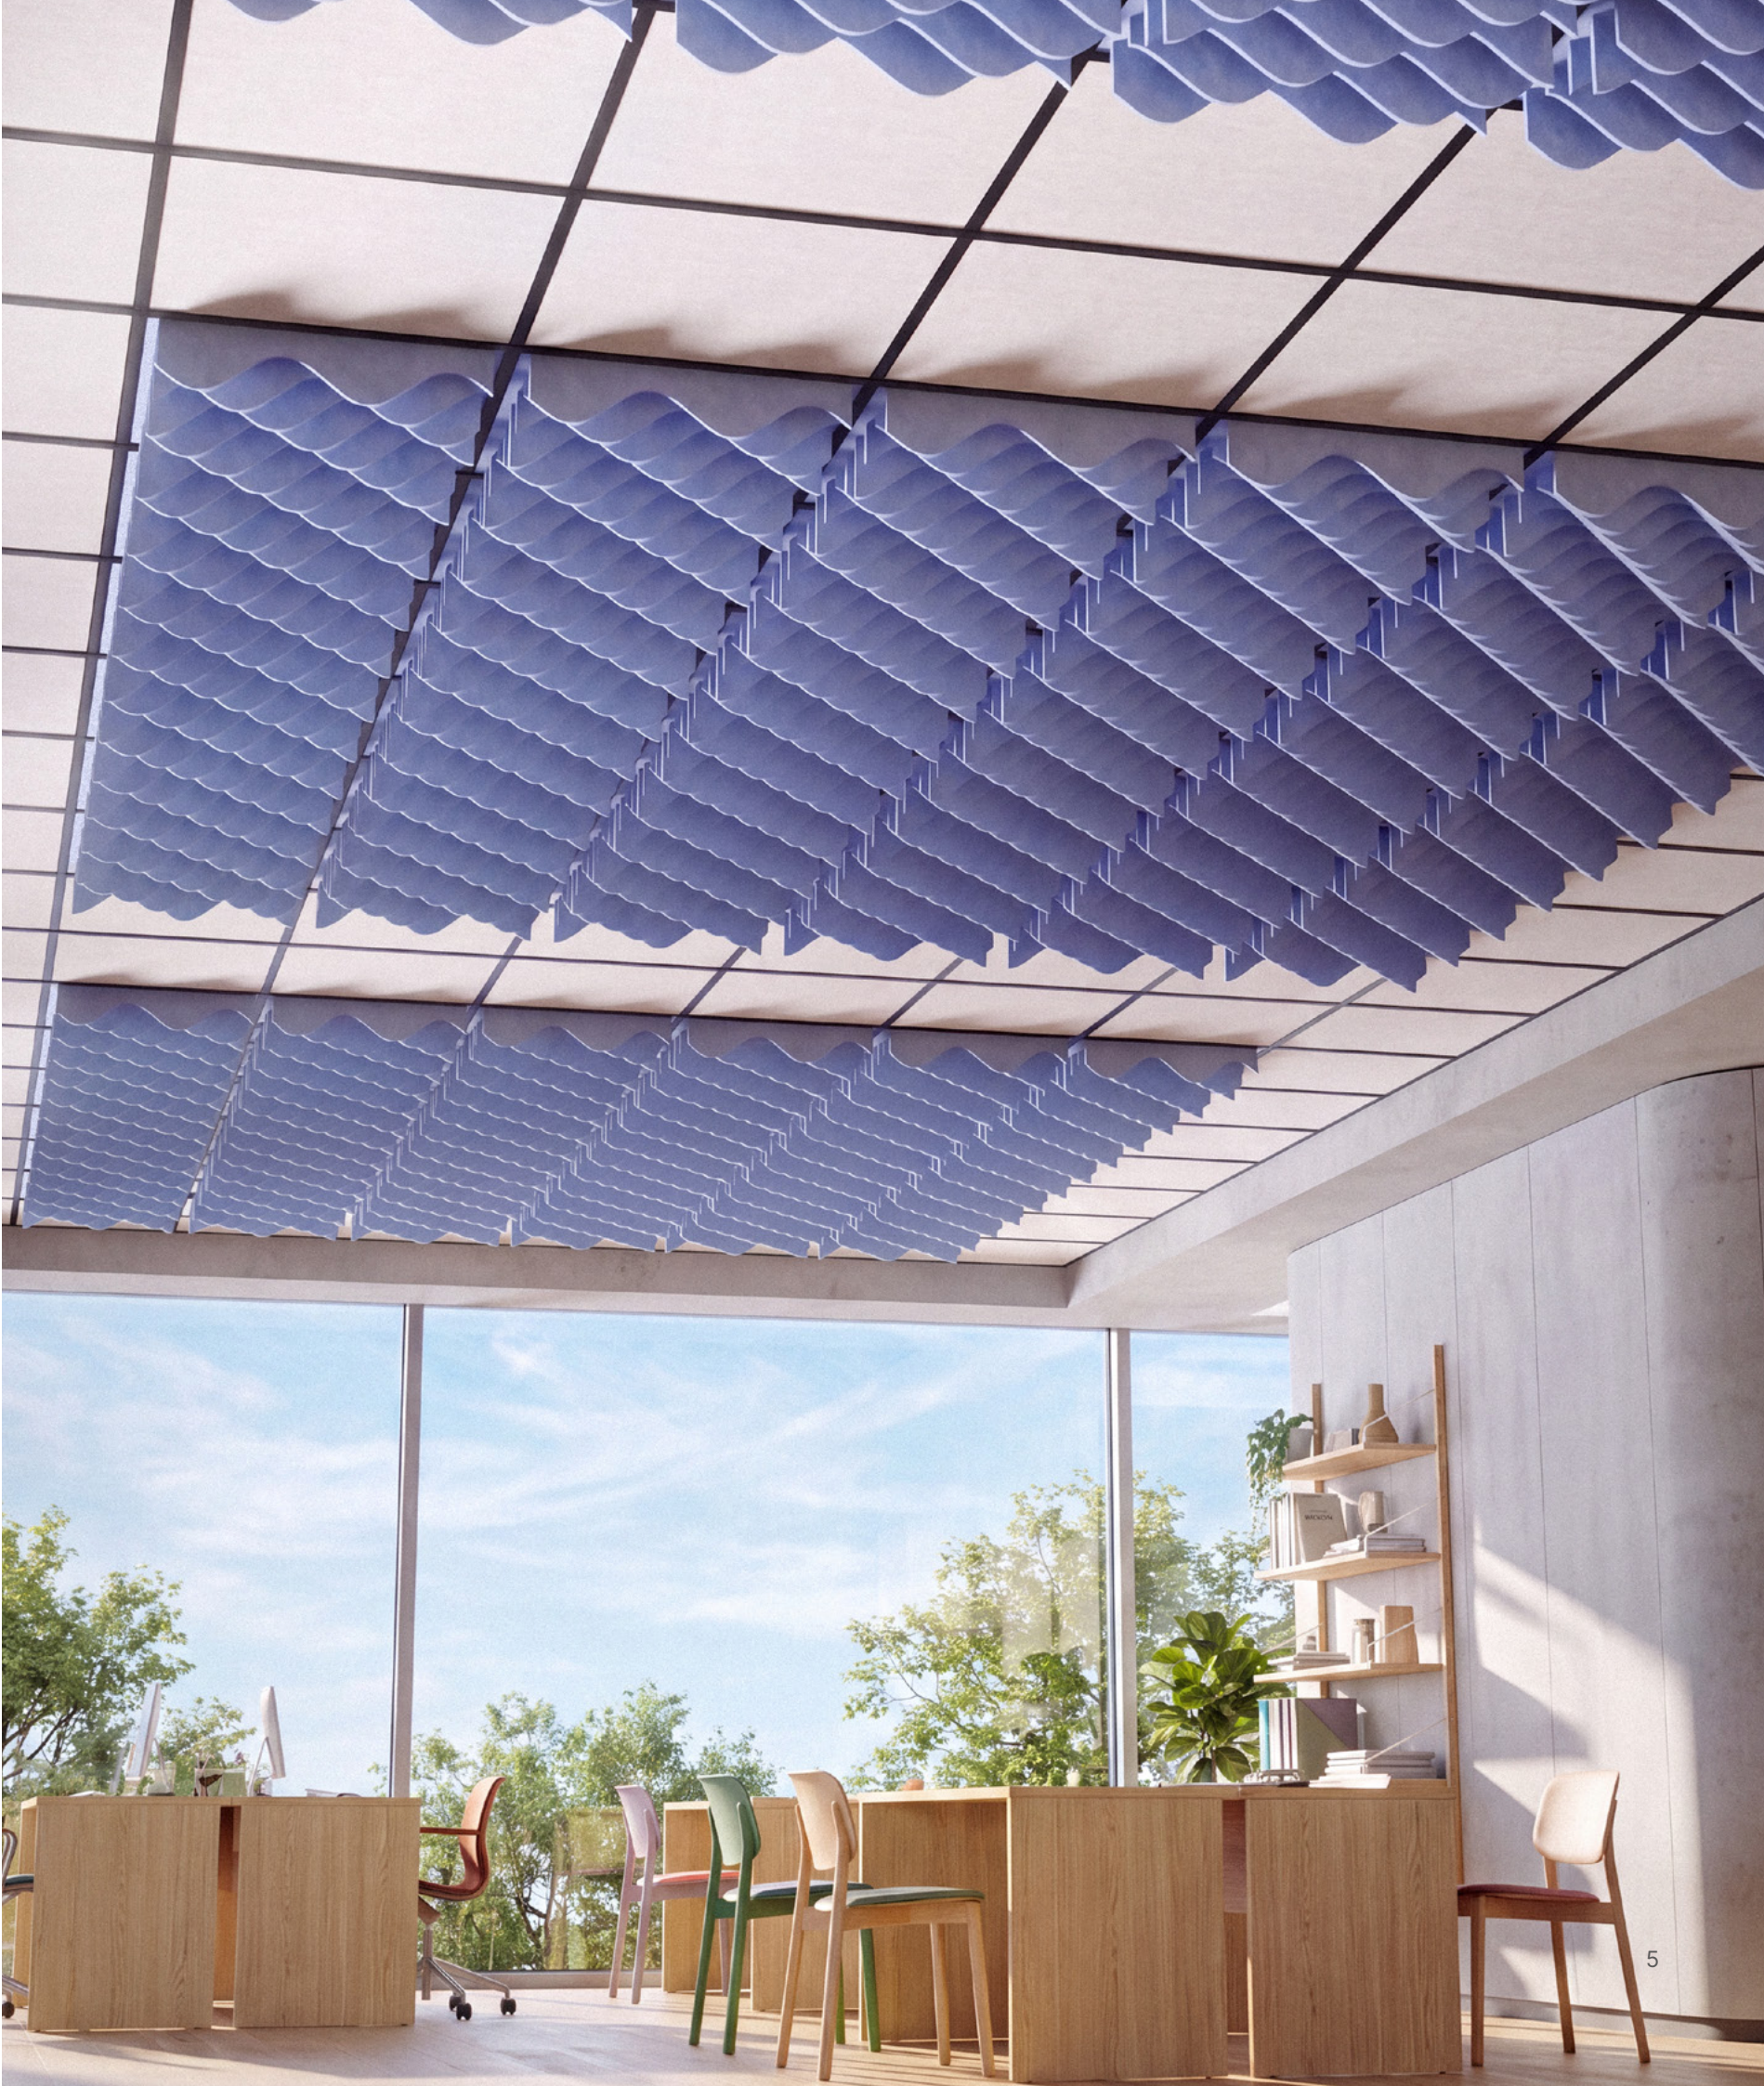

Why GridVibe™?

- Reduces reverberation and unwanted noise.
- Helps create more comfortable environments for work, communication and concentration
- Made from recycled Acoustic PET Felt
- Modular, lightweight construction for easy installation
- Designed to combine acoustic performance with contemporary aesthetics
- Available in a wide range of colours and configurations
- Created with a focus on quality, durability & sustainability

Origin

GridVibe™ was created in response to a simple challenge: "How can we significantly improve the acoustics of an existing interior without redesigning the entire space?". The ceiling provides a large, often unused surface for acoustic treatment. GridVibe™ transforms this space into an effective sound-absorbing system while simultaneously adding a distinctive architectural element.

The GridVibe™ Acoustic Ceiling Collection was developed to give architects and designers the freedom to combine acoustic performance, modularity and visual expression in commercial interiors.

①

The GridVibe collection is compatible with most standard ventilation and lighting systems.

②

Combine GridVibe with other DeFelt collections - discover the LookUp collection and complete your ceiling design!

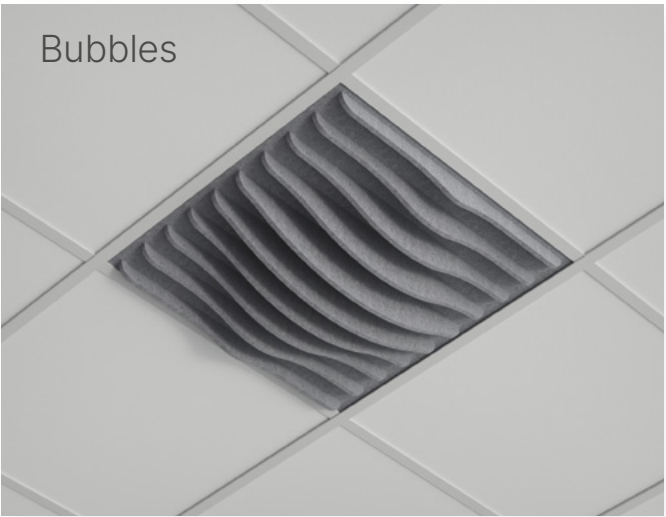

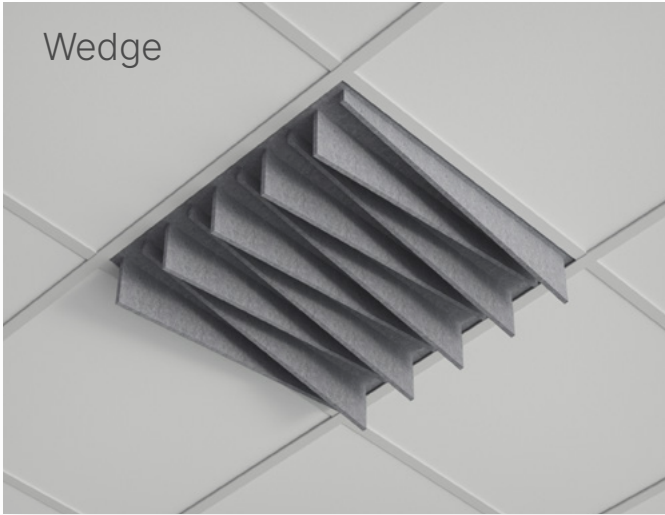

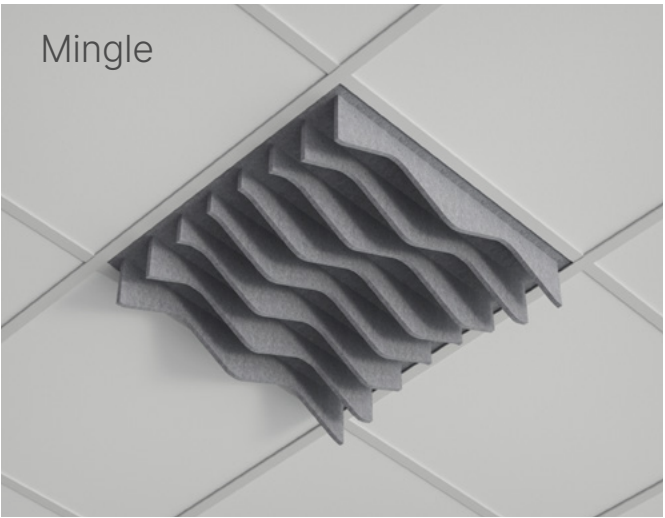

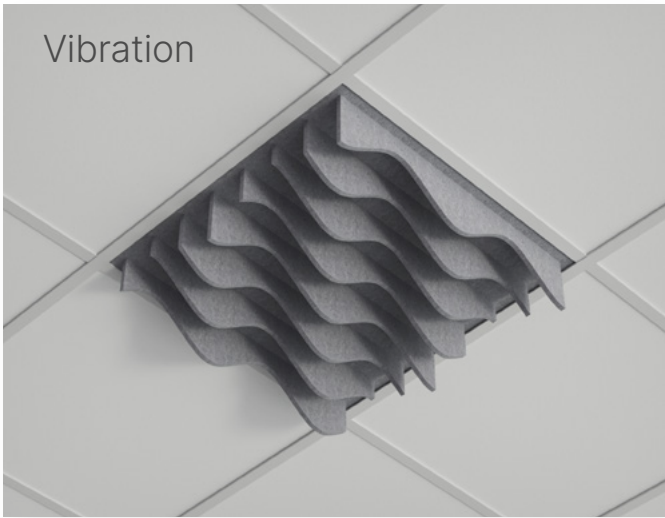

③

Choose from a wide range of felt enhancements - discover TwinFelt, FeltBlend, CorkFeltFusion, or wood prints WoodEcho.

④

Easy to install or rearrange.

 Royal Blue DF-72	GridVibe™ is available in 31 standard colours presented in this brochure. For larger projects, the collection can be produced in any of the 72 DeFelt® PET Felt colours. Before placing an order, please request our complete PET Felt Colour Catalogue to explore the full range of available colours. For colours not included in the standard GridVibe™ range, the minimum order quantity (MOQ) is 48 packs / 69,12 m2 / 192 GridVibe™ modules - equivalent to one Euro pallet.				

⚠ Keep in mind that the colors of PET felts and fabrics may vary slightly from what you see in the catalog.

For the most accurate representation, we recommend referring to our sample book or individually supplied samples. Due to the production process of both fiber and PET felt, there may be slight variations in material between different production batches. Additionally, please take into consideration that PET panels have distinct front and back sides, so always use the same side of the sheet within one installation.. Due to the manufacturing process, the felt board may show differences in shade depending on the direction of laying. We recommend laying all pieces in one direction to avoid undesirable visual effects. This is particularly important to consider when installing larger structures, such as wall-mounted panels or acoustic drop ceiling.
